**STANDARD COLLEGE NTUNGAMO**  
**Uganda Advanced Certificate of Education**  
**S.5 END OF TERM II EXAMS 2026**

**SUBSIDIARY ICT**

**PAPER 1**

**Theory**

2 Hours

**INSTRUCTIONS**

This examination paper consists of two sections; **A** and **B**. It has **three** items.

Section **A** is **compulsory**.

Section **B** has two optional items. Respond to **one** item from this section.

Any additional item responded to will **not** be scored.

Begin **each** item on a **fresh** page.

**All** responses **must** be written on the **answer sheets** provided.

## SECTION A

### This item is compulsory

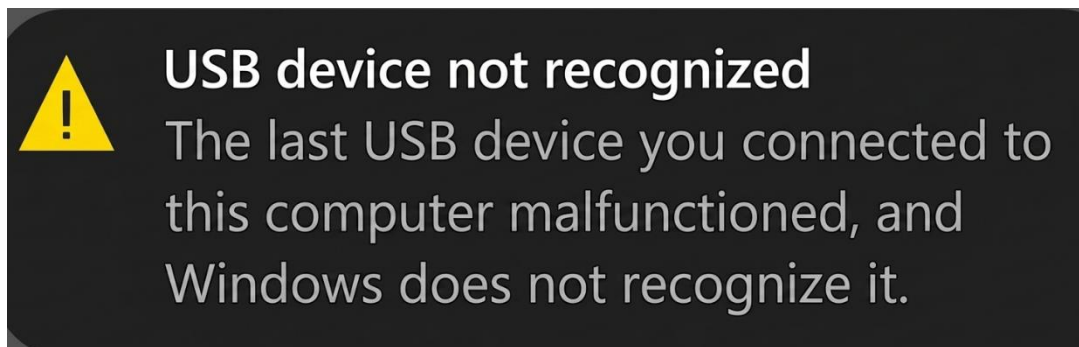

#### Item 1

Nyamunuka People's SACCO is preparing for its Annual General Meeting (AGM) on September 17, 2026, at Kyamate Playground. Over 20,000 members are expected to attend.

Mrs. Namukasa, the SACCO Secretary, needs to prepare for the following event requirements:

- Preparing and displaying a clear visual summary of the manager's speech outdoors in broad daylight.
- Digitally recording member attendance.
- Taking photos and video recordings of the event.
- Generating hard copies of membership certificates and policy guidelines for all 20,000 members.

To save time, Mrs. Namukasa plugged in a USB flash drive containing last year's speech and policy drafts. However, her computer displayed a "USB Device Not Recognized" error message. Re-plugging the drive into different ports did not work. She is worried about missing her printing deadlines and needs urgent help.

*Figure 1: Windows USB Error*

#### Task:

- a) Assess Mrs. Namukasa's situation and advise her on how to successfully prepare for the Annual General Meeting.
- b) Analyze Mrs. Namukasa's computer behavior and advise her on how its current situation and future challenges can be addressed .

## **SECTION B**

### **Attempt one item from this section**

#### **Item 2**

Victoria High School recently bought new ICT equipment to set up a new computer laboratory. The equipment arrived packed in two separate boxes for each computer:

Box A contained components such as the motherboard, CPU, RAM modules, hard disk drive (HDD), power supply unit (PSU), and cooling fan.

Box B contained components including a monitor, keyboard, mouse, barcode reader, printer, projector, and external speakers.

Ms. Akello, the school ICT assistant, was given the task of assembling the computers and setting up the lab. However, during the setup, she faced several challenges:

She was confused about which components belong inside the system unit and which ones connect externally as peripheral devices.

She plugged the monitor and printer into the computer, but neither device turned on or displayed anything because the power cables and data cables (HDMI and USB) were wrongly connected.

When she turned on one assembled computer, the system unit powered on, but the keyboard and mouse did not respond at all.

Ms. Akello needs a clear, easy-to-understand guide to help her correctly identify, assemble, and connect all the equipment before classes begin.

#### **Task:**

As an ICT student, assist Ms. Akello by writing a guide advising her on:

- a)** Distinguishing between devices in Box A and devices in Box B, giving the primary function of each item found in Box B.
- b)** Categorizing the devices in Box B into Input and Output devices, and providing step-by-step instructions on how to safely connect all devices in Box B to the system unit.

### Item 3

Mubende High School recently hosted its annual Inter-House Sports and Drama Competition. The ICT department recorded the entire event using HD digital cameras, resulting in 1,200 high-resolution photos (average size 5 MB each) and 10 high-definition video clips (average size 1.5 GB each).

The Headteacher has tasked the ICT Teacher with transferring all these media files from the school computer's internal hard drive to portable storage devices so they can be delivered to the district education officer, archived safely, and shared with the school's digital media club.

However, the ICT department only has the following secondary storage media available in their store:

- 4 x Flash Disks (8 GB capacity each)
- 2 x Standard DVDs (4.7 GB capacity each)
- 1 x External SSD (64 GB capacity)

*(Note: 1 GB = 1,024 MB)*

#### Tasks:

- a) Write a report analyzing the given media file sizes, calculating the total storage capacity required in Gigabytes (GB), and advising the ICT teacher on the most suitable storage device available from the store to hold the entire media collection. *(Show all mathematical working and justify your choice).*
- b) Assess the data transfer process and outline the step-by-step procedure to safely copy the files to the selected device and disconnect it.

**END**
